NABARD Grade A · ARD · PYQ analysis NABARD Grade A ARD Topic-Wise Weightage: Last 5 Years PYQ Analysis (2020–2024) **NABARD Grade A ARD** is one of the three merit sections in Phase 1 and plays an important role in Phase 2 as well. But all ARD topics do not carry equal weightage. A detailed analysis of previous NABARD Grade A papers shows recurring questions from areas such as **Animal Husbandry, Soil & Water Conservation, Horticulture, Agronomy and ARD Current Affairs**. In this article, C4S analyses the last five years of NABARD Grade A ARD PYQs topic by topic to identify high-weightage chapters, recurring themes and priority areas for NABARD Grade A 2026 preparation. By C4S Courses Editorial Team Published: 13 August 2026 Updated: 13 August 2026 Reading time: 17 min

Contents 5-Year PYQ Analysis — Key Findings Topic-Wise Weightage — Year-Wise Table 5-Year Share of Each ARD Topic Most Asked ARD Topics — Chart Consistency Score Static vs Current Affairs Weightage Animal Husbandry PYQ Analysis Soil & Water Conservation PYQ Analysis Plantation & Horticulture PYQ Analysis Agronomy & Field Crops PYQ Analysis Irrigation & Water Resource PYQ Analysis Agriculture Engineering PYQ Analysis Fisheries PYQ Analysis Forestry PYQ Analysis Agriculture Extension PYQ Analysis Agricultural Economics PYQ Analysis Rural Development PYQ Analysis ARD Current Affairs (part of ESI CA) Most Repeated ARD Concepts ARD Phase 2 PYQ Trend ARD Priority Chapters for 2026 How to Prepare ARD Based on Weightage NABARD Grade A ARD FAQs

01NABARD Grade A ARD 5-Year PYQ Analysis (2020–2024) — Key Findings ARD carries **40 marks in Phase 1** and is one of the three merit sections along with Economic & Social Issues and General Awareness. It returns again in **Phase 2 Paper II** in both objective and descriptive form. That double appearance is why ARD, more than any other subject, rewards knowing where the questions actually come from. Across the five papers, **190 ARD questions** have been classified into eighteen topic areas. Four blocks alone account for well over half of them:

Topic	5-year questions	Share	Pattern
ARD Current Affairs (part of ESI Current Affairs & Schemes — no separate preparation needed)	46	24.2%	8-10 questions in every single year
Soil & Water Conservation	23	12.1%	Every year; peaked at 9 in 2023
Animal Husbandry & Poultry	21	11.1%	Most stable topic — 3 to 5 every year
Plantation & Horticulture	19	10.0%	Every year; 3 to 5 questions
These four together	109	57.4%	Of 190 classified ARD questions

Four topics out of eighteen carry more than half the section. That single fact should determine how you

sequence ARD preparation. The full analysis below reports: **Year-wise question count** for each topic, and the five-year total **Percentage share** of each topic in the total ARD question pool **Consistency score** — how many of the five years each topic appeared in **Static versus current affairs split** for each year **Most repeated concepts**, not just chapters **Phase 2 objective and descriptive trends** Data source and period The question counts on this page come from **C4S Courses' own topic-wise ARD PYQ classification**, published in our ARD preparation guide. The five years shown are **2020, 2021, 2022, 2023 and 2024**. Where a topic was not separately reported for a year, the cell shows "—" rather than zero, because *not reported* and *not asked* are different things. The 2025 paper will be added to this table once the C4S classification for that cycle is published. On methodology Questions are classified by the *concept tested*, not by the word that appears in the question. A question on a livestock scheme is counted under Animal Husbandry if it tests breed or production knowledge, and under ARD Current Affairs if it tests the scheme's outlay or launch year. A single taxonomy is applied across all five years so the comparison is meaningful. Where a question spans two areas, it is assigned to the dominant one and not double-counted. 02NABARD Grade A ARD Topic-Wise Weightage — Year-Wise Table This is the core dataset. Read down a column to see how a single year was distributed; read across a row to see whether a topic is reliably asked or spikes occasionally.

ARD Topic						5-Year Total	Priority

035-Year Contribution of Each ARD Topic Share is calculated as *topic questions ÷ total ARD questions across five years × 100*. This answers the question candidates actually ask: which chapters carry maximum weightage?

Topic	Questions in 5 Years	Approx. Share	Preparation Priority

04NABARD ARD Most Asked Topics — Last 5 Years NABARD Grade A ARD topic-wise weightage — 5-year totals Questions classified per topic across five Phase 1 papers 05Consistency Score: which topics are reliably asked Total questions alone can mislead. A topic that contributed fifteen questions concentrated in two years is less dependable for planning than one contributing thirteen spread evenly across all five. Consistency measures how many of the five years a topic appeared in.

Topic	Total Q	Years Appeared	Consistency

How to use this alongside weightage Study first what is **both high-weightage and high-consistency** — those are the topics you can count on. Treat high-weightage but low-consistency topics as important but volatile, and low-weightage but high-consistency topics as cheap, reliable marks worth securing early because they are usually small chapters. 06Static vs Current Affairs Weightage in NABARD ARD This split determines how you allocate time between building a static base and maintaining a current affairs register.

Year	Static ARD	ARD Current Affairs	Total

How much ARD current affairs should you prepare? Current affairs in ARD is not general news. It is a defined and finite set: **Union Budget** — agriculture and rural development allocations, new announcements **Economic Survey** — the agriculture chapter, key data points **New missions and schemes** — name, ministry, outlay, target, launch year **MSP announcements** for the kharif and rabi seasons **Production estimates** — advance estimates for foodgrains, horticulture, milk, fish **Reports and indices** — India State of Forest Report, livestock census, NABARD publications **Agricultural trade and export policy** developments Because that list is finite, ARD current affairs is one of the highest-return areas in the whole syllabus — provided it is tracked continuously from month one rather than assembled in the final fortnight. One register, two sections This block is **part of ESI Current Affairs & Schemes and needs no separate preparation**. The same scheme, budget announcement or report can be asked under ARD or under ESI depending on how the question is framed, so maintain a single current affairs and schemes register that serves both merit sections. 07Animal Husbandry PYQ Analysis Animal Husbandry Priority: Very High **Frequently tested areas:** Cattle, buffalo, sheep, goat breedsPoultry breeds &

management Animal diseases & vaccinationFeed, fodder & nutrition Dairy development & Operation FloodLivestock census data Reproduction & breeding techniquesMilk production & leading states Government programmes — Gokul Mission, NLM, AHIDF C4S preparation priority: VERY HIGH Animal husbandry rewards factual recall more than conceptual reasoning. Breeds, indigenous versus exotic classification, disease-causative agent pairs and scheme names recur across cycles. Build a single revision table of breeds and diseases early, and update the scheme column each budget. NABARD Grade A Animal Husbandry PYQ Analysis → 08Soil & Water Conservation PYQ Analysis Soil & Water Conservation Priority: Very High **Frequently tested areas:** Soil types of India & their distributionSoil pH, salinity & alkalinity Soil organic carbon & fertilityMacro & micronutrients, deficiency symptoms Fertilisers & nutrient managementSoil erosion types & conservation methods Soil Health CardWatershed management Problem soils & reclamation C4S preparation priority: VERY HIGH Soil science is the most repetitive block in ARD and among the most static — what you learn once holds. Nutrient deficiency symptoms, soil classification and conservation techniques are the recurring cores. NABARD Grade A Soil Science PYQ Analysis → 09Plantation & Horticulture PYQ Analysis Plantation & Horticulture Priority: Very High **Frequently tested areas:** Leading producer states — fruits & vegetablesPlantation crops — tea, coffee, rubber, spices Horticultural crop varietiesProtected cultivation Post-harvest management of perishablesMIDH & horticulture missions Value addition & food processingFloriculture & medicinal plants C4S preparation priority: VERY HIGH State-wise production leadership is asked repeatedly and is quick to secure. Plantation crop questions cluster around growing conditions and leading states rather than agronomic detail. NABARD Grade A Horticulture PYQ Analysis → 10Agronomy & Field Crops PYQ Analysis Agronomy & Field Crops Priority: High **Repeated concepts:** Cropping seasons — kharif, rabi, zaidTillage types Sowing methods & spacingWeeds & weed management Cropping systems & rotationField crop varieties Agro-climatic zonesSeed production & seed replacement rate System of Crop Intensification / SRIPrecision & organic farming C4S preparation priority: HIGH Agronomy is broad but shallow in this exam. Agro-climatic zones, cropping seasons and crop-specific facts recur; deep agronomic calculation does not. **Read this alongside the agronomy-family rows in the master table** — Farming System (8 questions), Agrometeorology (7), Seed & Sowing (4), Important Agronomic Practices (4), Introduction to Agriculture (2) and Cropping System & Pattern (1). Counted together with Agronomy & Field Crops itself, this family contributes **37 of the 190 classified questions** — more than any single block except current affairs. Individually each looks minor; collectively the agronomy family is unavoidable. Agronomy, Meteorology & Seed Science PYQ Analysis → 11Irrigation & Water Resource PYQ Analysis Irrigation & Water Resource Priority: High Irrigation methods — surface, drip, sprinklerWater use efficiency Crop water requirementMicro-irrigation schemes PMKSY componentsCommand area development Groundwater statusWatershed & rainwater harvesting RIDF and irrigation financing C4S preparation priority: HIGH Often scheme-linked. Questions frequently pair an irrigation technique with the mission that funds it, so study method and scheme together rather than separately. 12Agriculture Engineering PYQ Analysis Agriculture Engineering Priority: Medium Tillage implementsTractors & farm power sources Sowing & harvesting machineryCustom hiring centres Post-harvest handling & storage structuresCold chain infrastructure Grain silos, bins & godownsDrones in agriculture C4S preparation priority: MEDIUM A small, contained block. Machinery-to-function matching and storage structures are the usual formats, with drone-related questions rising as the technology enters schemes. 13Fisheries PYQ Analysis Fisheries Priority: High Inland vs marine fisheriesAquaculture systems Fish species of economic importanceBlue Revolution PMMSYLeading fish-producing states Fisheries terminologyFisheries infrastructure fund C4S preparation priority: HIGH Fisheries is compact and scheme-heavy, which makes it efficient to prepare. Terminology and PMMSY details are the recurring cores. NABARD Grade A Fisheries PYQ Analysis → 14Forestry PYQ Analysis Forestry Priority: Medium Forest types of IndiaIndia State of Forest Report data Agroforestry & social forestryJoint Forest Management Silviculture basicsForest Rights Act CAMPA & afforestationMinor forest produce & MSP for MFP C4S preparation priority: MEDIUM Report-driven. The India State of Forest Report is the single most productive source — forest cover percentages, state rankings and change data. 15Agriculture Extension PYQ Analysis Agriculture Extension Priority: Medium Extension approaches &

methodsICAR & KVK network KVK functions & mandateATMA Farmer field schoolsICT in extension Community Resource Persons & Krishi Sakhi C4S preparation priority: MEDIUM · Strong interview value Modest in Phase 1 but disproportionately useful in Phase 2 descriptive answers and the interview, where extension is a favourite theme. 16Agricultural Economics PYQ Analysis Agricultural Economics Priority: High MSP & procurementAgricultural marketing & e-NAM Agricultural credit & priority sector lendingKisan Credit Card Farm management conceptsAgricultural trade & export policy Food security & buffer stocksCost concepts — A2, FL, C2 C4S preparation priority: HIGH This block overlaps heavily with ESI, so preparing it once serves two merit sections. Cost concepts and MSP mechanics are recurring and precise — learn the definitions exactly. 17Rural Development PYQ Analysis Rural Development Priority: Very High Panchayati raj & 73rd AmendmentSHGs & SHG-Bank Linkage FPOs & producer companiesDAY-NRLM & Lakhpati Didi MGNREGARural housing, roads & sanitation NABARD's role, RIDF & refinanceRural credit institutions C4S preparation priority: VERY HIGH This is NABARD's own mandate, which is exactly why it is asked — in Phase 1, in Phase 2 descriptive answers and in the interview. Questions on NABARD's own funds and instruments belong here and should never be left to chance. Self Help Groups — complete guide → · Farmer Producer Organisations — complete guide → 18ARD Current Affairs PYQ Analysis (part of ESI Current Affairs & Schemes) ARD Current Affairs Priority: Very High No separate prep Union Budget agriculture allocationsEconomic Survey agriculture chapter New missions & scheme launchesMSP announcements Production & advance estimatesCommittee & report findings Agricultural trade policyNABARD annual report themes C4S preparation priority: VERY HIGH · Continuous tracking required Important — this is not a separate subject to prepare **ARD Current Affairs is part of your ESI Current Affairs & Schemes preparation. You do not have to prepare it separately.** Many current affairs items fall under both ARD and ESI at the same time. A government scheme concerning agriculture also affects the rural economy, so the same item can be asked in either section. One running current affairs and schemes register serves both merit sections — splitting notes into an "ARD current affairs" file and an "ESI current affairs" file only duplicates work. In practice: study current affairs and schemes *once*, understand each item properly, and accept that it may appear under either heading. The 24.2% figure above is the share of ARD questions drawn from this shared pool — not an additional syllabus to cover. The single biggest separator between candidates. Everyone eventually learns soil types; far fewer walk in knowing this year's outlay figures and production estimates. Maintain **one** running register from day one, shared across ARD and ESI. Agriculture Current Affairs → · NABARD Current Affairs → Track it daily, not monthly At 46 questions over five years, ARD Current Affairs is the highest-weightage block on this page. C4S posts daily agriculture and rural development updates, schemes and quizzes free on Telegram @Clarity4Sure, and monthly compilations on the Agriculture Current Affairs page. 19Most Repeated ARD Concepts in the Last 5 Years Chapters tell you where to look. Concepts tell you what to memorise. These are the concept clusters that recur across papers, expressed as question themes rather than reproduced questions.

Concept	Topic	Observed pattern

Sample question themes Paraphrased by concept rather than reproduced verbatim, so you can see the *shape* of what is asked:

Question theme	Concept tested	Topic	Difficulty
Identifying an indigenous cattle breed by origin state	Breed classification	Animal Husbandry	Easy
Matching a livestock disease to its causative organism	Disease-pathogen pairing	Animal Husbandry	Moderate
Which nutrient deficiency produces a described symptom	Micronutrient deficiency	Soil Science	Moderate
The purpose and coverage of the Soil Health Card	Scheme objective	Soil Science / Schemes	Easy

Question theme	Concept tested	Topic	Difficulty
Which state leads production of a named horticultural crop	State-wise production	Horticulture	Easy
Growing conditions suited to a plantation crop such as coffee	Crop-climate matching	Plantation crops	Moderate
The number and basis of India's agro-climatic zones	Zonal classification	Agronomy	Moderate
Principles or water-saving claim of the System of Rice Intensification	Crop management system	Agronomy	Moderate
Which irrigation method gives the highest water use efficiency	Irrigation efficiency	Irrigation	Easy
Components or objective of a named irrigation mission	Scheme structure	Irrigation / Schemes	Moderate
Distinguishing inland from marine fisheries contribution	Fisheries classification	Fisheries	Easy
Objective or outlay of the flagship fisheries scheme	Scheme detail	Fisheries / Schemes	Moderate
Forest cover percentage or state ranking from the latest ISFR	Report data	Forestry	Moderate
Mandate or number of Krishi Vigyan Kendras	Institutional function	Extension	Easy
Definition of a cost concept used in MSP fixation	Cost concepts A2, FL, C2	Agricultural Economics	Moderate
Minimum membership or legal form of a producer organisation	Institutional structure	Rural Development	Moderate
Which fund or instrument NABARD operates for a stated purpose	NABARD instruments	Rural Development	Moderate
Outlay or target announced for a scheme in the latest Budget	Current affairs recall	ARD Current Affairs	Moderate

20NABARD ARD Phase 2 PYQ Trend Most weightage analyses stop at Phase 1. That is a mistake, because Phase 2 is where the rank is actually built — Phase 1 marks are not carried into the final merit. Objective ARD in Paper II — year-wise

Year	ARD Static	ARD Current Affairs	Total ARD	Paper II objective total

Three things stand out. The **format change in 2021** halved the objective load. **ARD current affairs stayed remarkably stable** at 4 to 13 questions regardless of format. And **2024 saw a sharp swing towards static** — 27 static questions against 11 the year before, the largest single-year shift in the dataset. Compared with Phase 1, Paper II questions lean more towards **application and paragraph-based interpretation** than plain recall, and scheme detail features heavily. Descriptive ARD in Paper II Six questions are set and four must be attempted — **two of 15 marks and two of 10 marks** — for 50 marks in 90 minutes, covering agriculture, rural development, economic and social issues, government policies and contemporary issues. Descriptive ARD themes recur around a recognisable set: AgroforestryExtension educationAgricultural marketing Farmer producer organisationsRural credit & financial inclusion Climate-resilient agricultureWatershed development Food processing & value additionDoubling farmer income Government mission evaluation The gap this exposes A candidate who has prepared ARD only to objective depth can answer "what is agroforestry" but cannot write 250 structured words on its role in climate resilience with data, a counter-view and a conclusion. **Phase 2 is 150 of its 200 marks in descriptive form.** Weightage analysis tells you which topics to write practice answers on — it does not replace writing them. NABARD Grade A Descriptive Preparation Strategy → 21NABARD ARD Priority Chapters for 2026 **Tier 1 — Must complete** High weightage + high consistency Populated from the dataset

— topics with the highest 5-year totals appearing in all or nearly all years. **Tier 2 — Important** Moderate weightage + recurring Populated from the dataset. **Tier 3 — Light pass** Low historical frequency but part of the syllabus Populated from the dataset. Read this before you use the tiers Priority classification is based on **historical PYQ trends and does not predict what NABARD will ask in 2026**. Tiering tells you what to complete first and how deeply — it is not a licence to skip Tier 3. 22Don't make this mistake Weightage is for prioritisation, not elimination A candidate sees a topic with few historical questions and decides to skip it entirely. That is the most expensive mistake this kind of analysis can cause. **PYQ weightage is not future guaranteed weightage.** NABARD sets a fresh paper each cycle and can shift emphasis between areas — a low-frequency topic in the past five years may carry more in the next. Every topic listed here is in the official syllabus, which means it is fair game. Use this data to decide *sequence and depth*: what to study first, what to revise most often, and where to accept a lighter first pass. Never use it to decide what to leave untouched. Two further cautions. First, weightage is measured in **questions, not marks** at Phase 1 level, where every question carries one mark — but Paper II objective questions carry one or two marks, so raw counts understate some areas there. Second, a topic's share can look small simply because it is a small chapter; measured per hour of study, small chapters are often the best value on the paper. 23How to Prepare ARD Based on PYQ Weightage **Start with Tier 1, not with the syllabus order.** Animal husbandry, soil science, horticulture, rural development and current affairs before anything else. **Open a current affairs register on day one.** ARD current affairs cannot be back-filled; it accumulates. **Build fact tables, not notes.** Breeds, diseases, soil types, leading states, scheme outlays — these belong in tables that shrink at every revision. **Study scheme and concept together.** Questions routinely pair a technique with the mission funding it. **Write descriptive answers on Tier 1 topics from the first month.** The same topics dominate Phase 2 descriptive papers. **Revise by weightage, not by chapter order.** In the final fortnight, time spent should mirror the share table on this page. **Do a light pass on Tier 3.** Enough to attempt a question, not enough to consume time better spent elsewhere. **Free: the 90-day plan that sequences ARD by weightage** Subject order, daily hours, mock schedule and revision cycles — free on the C4S YouTube channel. ▶ Watch **Sample ARD lecture: Farmer Producer Organisations** See how a Tier 1 rural development topic is taught to Phase 2 descriptive depth. ▶ Watch **Topper Talk: how selected candidates actually covered ARD** Full interview playlist with C4S students selected in NABARD Grade A. ▶ Playlist **NABARD Grade A Syllabus**Phase 1 & Phase 2, subject-wise **How to Prepare ARD**Study method & sources **NABARD Previous Year Papers**PYQ archive **Animal Husbandry PYQ**Topic-level analysis **Agronomy & Seed Science PYQ**Topic-level analysis **Fisheries PYQ**Topic-level analysis **Horticulture PYQ**Topic-level analysis **Soil Science PYQ**Topic-level analysis **Agriculture Current Affairs**Monthly compilations **NABARD Exam Pattern**Phase 1 & Phase 2 structure **NABARD Notification 2026**Status, dates, vacancy **NABARD Grade A Cut Off**Previous years' analysis 24NABARD Grade A ARD FAQs Which topics have the highest weightage in NABARD ARD? Across recent papers the most consistently asked areas are Animal Husbandry, Soil & Water Conservation, Plantation & Horticulture, Agronomy, Rural Development and ARD Current Affairs. The year-wise counts and five-year totals for every topic are in the weightage table above. How many questions are asked from Animal Husbandry in NABARD? The year-wise count is given in the Animal Husbandry section. It is consistently among the highest-contributing ARD areas, with breeds, diseases, dairy development and livestock schemes recurring across cycles. How much ARD current affairs is asked in NABARD Grade A? **It is part of your ESI Current Affairs & Schemes preparation and does not need separate study.** ARD Current Affairs contributes a substantial and recurring share of the 40-mark section every year — the year-wise split is in the static versus current table. The scope is finite: Budget allocations, the Economic Survey's agriculture chapter, new missions, MSP announcements, production estimates and major reports. Which chapters are important for NABARD Grade A ARD? Use the Tier 1, 2 and 3 classification, which combines weightage with consistency. Tier 1 topics are both high-weightage and asked in nearly every year, so they should be completed before anything else. Is ARD difficult in NABARD Grade A? ARD is broad rather than deep. It is tested at a conceptual and policy level rather than at the depth of an agriculture degree, and candidates from engineering, commerce and arts backgrounds clear it regularly. The difficulty lies in the range of

areas plus a continuously changing current affairs component — which is exactly what weightage analysis helps manage. Can I skip low-weightage ARD topics? No. Previous year weightage is a prioritisation tool, not an elimination tool. NABARD can shift emphasis between cycles, and every topic here is in the official syllabus. Use the data to decide what to study first and how deeply, not what to leave out. Does ARD appear in Phase 2 as well? Yes. ARD shares Paper II with Economic & Social Issues, in objective and descriptive form. The descriptive component requires 10-mark and 15-mark answers, so ARD must be prepared to writing depth. See the Phase 2 trend section. How should I use this weightage data with limited time? Mirror the share table. If a topic contributes roughly a fifth of ARD questions, it deserves roughly a fifth of your ARD revision time. Combine that with the consistency column: where weightage and consistency are both high, study first and revise most often. 25Structured ARD preparation with C4S C4S NABARD Grade A 2026 Mentorship Weightage analysis tells you where to spend time. A mentorship programme makes sure you actually do — with ARD taught to Phase 2 descriptive depth, **evaluated answer writing**, continuously updated current affairs and mock tests with sectional analysis. **32**Selections
